-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art (AAPA) in view of Chien et al. (US 6,852,376 B2).

AAPA discloses a device comprising a multi-domain vertical alignment thin film transistor liquid crystal display panel (Fig. 1); a first wide viewing film (112) on a first surface of the thin film transistor liquid crystal display panel; a first polarizer film on the first viewing film (100); a second wide viewing film (108) on a second surface of the thin film transistor liquid crystal display panel; and a second polarizer film (110) on the second wide viewing film. However, the reference does not disclose a device wherein a surface of a polarize film has a diffusive pattern, wherein the surface of the polarizer film has a patterned surface as to form the diffusive pattern.

Chien et al. discloses a device wherein a surface of a polarize film has a diffusive pattern, wherein the surface of the polarizer film has a patterned surface as to form the diffusive pattern (Fig. 4, ref 1, 3)

It would have been obvious to one having ordinary skill in the art at the time the invention was made for the polarizing film to have a diffusive pattern since one would be motivated to prevent glare by achieving low reflectivity (abstract).
